

Contents

Preface	xii
Author biography	xiii
1 The discovery of the atomic nucleus	1-1
1.1 Rutherford scattering	1-3
1.1.1 Remarks on units	1-6
1.1.2 Interpretation of the differential cross section	1-7
1.1.3 Remarks on Rutherford scattering	1-9
References	1-11
2 The nuclear radius	2-1
2.1 Mott scattering	2-1
2.2 Form factor	2-3
2.3 Muonic atoms	2-9
2.4 Nucleon form factor	2-10
References	2-15
3 Nuclear masses	3-1
3.1 The Fermi gas model	3-6
3.2 The liquid drop model	3-10
References	3-13
4 Radioactive decay	4-1
4.1 Decay law	4-1
4.2 Partial and total widths	4-5
4.3 Poisson statistics	4-8
References	4-9
5 Nuclear stability	5-1
5.1 γ -decay	5-2
5.2 β -decay	5-5
5.3 α -decay	5-8
5.4 Fission	5-15

5.4.1	Spontaneous fission	5-15
5.4.2	Induced fission	5-16
5.5	Radiation dosimetry	5-20
	References	5-22
6	The nuclear shell model	6-1
6.1	The electric quadrupole moment	6-7
	References	6-12
7	Elementary particles	7-1
7.1	Introduction	7-1
7.2	Mesons and baryons	7-4
7.3	Interactions	7-6
7.3.1	Conservation laws	7-9
7.3.2	Exchange force	7-11
7.3.3	Charged and neutral currents	7-14
7.3.4	Cross section and mean lifetime	7-15
7.4	Beyond the standard model	7-17
	References	7-20
8	Relativistic kinematics	8-1
8.1	$\pi^0 \rightarrow 2\gamma$	8-3
8.2	Invariant mass	8-9
8.3	$\pi \rightarrow \mu\nu$	8-10
8.4	Mandelstam variables s and t	8-13
8.5	Proper time	8-14
8.6	Rapidity	8-15
	References	8-19
9	Accelerators and detectors	9-1
9.1	Accelerators	9-1
9.2	Charged particle interaction with matter	9-9
9.3	Multiple scattering	9-14
9.4	Energy loss of electrons	9-17
9.5	Interaction of photons with matter	9-18
9.6	Wire chambers	9-23

9.7	Scintillation counters	9-26
9.8	Bubble chambers	9-27
9.9	Segmented silicon detectors	9-29
9.10	Čerenkov counters	9-31
9.11	Transition radiation detectors	9-33
9.12	Electromagnetic calorimeters	9-36
9.13	Hadronic calorimeters	9-38
	References	9-39
10	The quark model	10-1
10.1	Strangeness	10-1
10.2	The hadron spectrum	10-3
	10.2.1 Mesons	10-3
	10.2.2 Baryons	10-7
	10.2.3 Isospin	10-10
	10.2.4 OZI rule	10-13
10.3	Charm and bottom quarks	10-13
	10.3.1 Charmonium	10-17
	10.3.2 Bottomonium	10-21
	10.3.3 Quarkonium	10-23
10.4	Colour	10-25
10.5	The top quark	10-29
	References	10-31
11	Conservation laws	11-1
11.1	Momentum conservation	11-2
11.2	Angular momentum	11-3
11.3	Parity	11-4
11.4	Internal parity	11-8
11.5	Gauge invariance	11-12
11.6	The helicity of the photon	11-14
11.7	C parity	11-21
11.8	Time reversal invariance	11-25
	11.8.1 Magnetic and electric dipole moments	11-26
11.9	CPT invariance	11-30
	References	11-32

12	Hadronic interactions	12-1
12.1	Cross section	12-1
12.2	Two-body final state	12-2
12.2.1	Detailed balance	12-4
12.3	Three-body final state	12-6
12.3.1	The spin of the charged kaon	12-9
12.3.2	The spin of the ω meson	12-10
12.3.3	Invariant mass distribution	12-12
12.4	Charge independence and isospin invariance	12-14
12.4.1	Nucleon–nucleon scattering	12-17
12.4.2	Pion–nucleon scattering	12-19
12.5	G parity	12-22
	References	12-25
13	Weak interactions	13-1
13.1	The discovery of the neutron	13-3
13.1.1	Neutron lifetime	13-4
13.2	β -decay	13-5
13.2.1	Allowed and forbidden transitions	13-6
13.2.2	ft -value	13-12
13.2.3	Coupling constants G_F and g_A/g_V	13-13
13.2.4	Sargent rule	13-14
13.3	Parity violation	13-16
13.3.1	Parity violation in nuclear β -decay	13-16
13.3.2	Parity violation in muon production and decay	13-18
13.3.3	The anomalous magnetic moment of the muon	13-21
	References	13-24
14	Neutrinos	14-1
14.1	The discovery of the neutrino	14-1
14.2	Mass measurements	14-4
14.2.1	ν_e mass	14-4
14.2.2	Solenoid retarding spectrometers	14-6
14.2.3	ν_μ and ν_τ masses	14-9
14.3	Solar neutrinos	14-11
14.4	The helicity of the neutrino	14-15
14.5	Dirac and Majorana neutrinos	14-17

14.6	Neutrino oscillations	14-19
14.6.1	The oscillation mechanism	14-22
14.6.2	Oscillations between three neutrino flavours	14-24
14.6.3	Δm_{23}^2 oscillations	14-26
14.6.4	Δm_{12}^2 oscillations	14-29
14.6.5	Measurement of θ_{13}	14-30
14.6.6	Matter effects on neutrino oscillations	14-33
14.6.7	The MSW effect in the Sun	14-36
	References	14-38
15	The Dirac equation	15-1
15.1	Standard representation	15-5
15.2	The discovery of the positron and of the antiproton	15-9
15.3	Chirality and handedness	15-11
15.4	Parity	15-13
15.5	Charge conjugation	15-14
15.6	Current	15-14
15.6.1	Current–current interaction	15-15
	References	15-18
16	The electroweak interaction	16-1
16.1	$V-A$ interaction	16-1
16.2	Weak isospin	16-7
16.2.1	Weak neutral currents	16-10
16.3	GIM mechanism	16-14
16.4	Gauge invariance in QED	16-19
16.5	Spontaneous symmetry breaking	16-22
16.6	Gauge invariance in the electroweak interaction	16-27
16.7	The Glashow–Weinberg–Salam model	16-30
	References	16-41
17	Applications of the standard model	17-1
17.1	Parity violation in electron–deuterium scattering	17-1
17.2	The discovery of the W^\pm and Z^0 bosons	17-6
17.2.1	W width	17-12
17.2.2	Z^0 width	17-15

17.3	The discovery of the Higgs boson	17-18
17.3.1	Width of the Higgs boson	17-23
17.4	Neutrino scattering	17-25
17.4.1	Charged currents	17-25
17.4.2	Neutrino–quark scattering	17-28
17.4.3	Neutral currents	17-31
17.4.4	Purely leptonic reactions	17-33
	References	17-37
18	Deep inelastic electron–proton scattering	18-1
	References	18-12
19	The $K^0 - \bar{K}^0$ system	19-1
19.1	The K_1 and K_2 mesons	19-1
19.1.1	Lifetimes of the K_1 and K_2 mesons	19-5
19.1.2	$K^0 - \bar{K}^0$ oscillations	19-8
19.1.3	Regeneration	19-10
19.2	CP violation	19-12
19.2.1	Indirect CP violation	19-14
19.2.2	Direct CP violation	19-19
19.3	Semileptonic K_L decays	19-22
19.3.1	T violation	19-24
	References	19-26
20	The $B^0 - \bar{B}^0$ system	20-1
20.1	The CKM matrix	20-1
20.2	$B^0 - \bar{B}^0$ oscillation	20-3
20.3	$B_s^0 - \bar{B}_s^0$ oscillation	20-7
20.4	CP violation in the $B^0 - \bar{B}^0$ system	20-9
	References	20-15
Appendices		
A	SU(3) wave functions of the light ground state mesons	A-1
B	Mass formula	B-1

C	SU(3) wave functions of light ground state baryons	C-1
D	The CKM matrix and <i>CP</i> violation	D-1
E	Infinitesimal gauge field transformation	E-1
F	Glossary	F-1
